

## Improving some Operator Inequalities for Positive Linear Maps

Chaojun Yang<sup>a</sup>, Fangyan Lu<sup>a,\*</sup>

<sup>a</sup>Department of Mathematics, Soochow University, Suzhou 215006, P. R. China

**Abstract.** Let  $0 < mI \leq A \leq m'I \leq M'I \leq B \leq MI$  and  $p \geq 1$ . Then for every positive unital linear map  $\Phi$ ,

$$\Phi^{2p}(A\nabla_t B) \leq \left( \frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)} \right)^{2p} \Phi^{2p}(A\sharp_t B)$$

and

$$\Phi^{2p}(A\nabla_t B) \leq \left( \frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)} \right)^{2p} (\Phi(A)\sharp_t \Phi(B))^{2p},$$

where  $t \in [0, 1]$ ,  $h = \frac{M}{m}$ ,  $K(h, 2) = \frac{(h+1)^2}{4h}$ ,  $Q(t) = \frac{t^2}{2} \left( \frac{1-t}{t} \right)^{2t}$  and  $Q(0) = Q(1) = 0$ . Moreover, we give an improvement for the operator version of Wielandt inequality.

### 1. Introduction

Throughout this paper, let  $m, m', M, M'$  be scalars and  $I$  be the identity operator. Other capital letters are used to denote the general elements of the  $C^*$  algebra  $B(\mathcal{H})$  of all bounded linear operators acting on a Hilbert space  $(\mathcal{H}, \langle \cdot, \cdot \rangle)$ . We write  $A \geq 0$  to mean that the operator  $A$  is positive. If  $A - B \geq 0$  ( $A - B \leq 0$ ), then we say that  $A \geq B$  ( $A \leq B$ ). If  $A, B \in B(\mathcal{H})$  are two positive operators, then the weighted arithmetic and geometric mean are respectively defined as:

$$A\nabla_\mu B = (1 - \mu)A + \mu B, \quad A\sharp_\mu B = A^{\frac{1}{2}}(A^{-\frac{1}{2}}BA^{-\frac{1}{2}})^\mu A^{\frac{1}{2}},$$

where  $\mu \in [0, 1]$ . When  $\mu = \frac{1}{2}$ , we write  $A\nabla B$  and  $A\sharp B$  for brevity, respectively, see [1] for more details. The Kantorovich constant is defined by  $K(t, 2) = \frac{(t+1)^2}{4t}$  for  $t > 0$ .

A linear map  $\Phi : B(\mathcal{H}) \rightarrow B(\mathcal{H})$  is called positive (strictly positive) if  $\Phi(A) \geq 0$  ( $\Phi(A) > 0$ ) whenever  $A \geq 0$  ( $A > 0$ ), and  $\Phi$  is said to be unital if  $\Phi(I) = I$ .

It is well known that for any two positive operators  $A, B$ ,

$$A \geq B \Rightarrow A^p \geq B^p$$

for  $p > 1$ .

Lin [10] showed that a reverse version of the operator AM-GM inequality can be squared: for  $0 < mI \leq A, B \leq MI$ ,

$$\Phi^2\left(\frac{A+B}{2}\right) \leq K^2(h, 2)\Phi^2(A\sharp B) \quad (1.1)$$

and

$$\Phi^2\left(\frac{A+B}{2}\right) \leq K^2(h, 2)(\Phi(A)\sharp\Phi(B))^2, \quad (1.2)$$

where  $\Phi$  is a unital positive linear map and  $K(h, 2) = \frac{(h+1)^2}{4h}$  with  $h = \frac{M}{m}$ .

Zhang [14] generalized (1.1) and (1.2) when  $p \geq 2$ :

$$\Phi^{2p}\left(\frac{A+B}{2}\right) \leq \frac{(K(h,2)(M^2+m^2))^{2p}}{16M^{2p}m^{2p}}\Phi^{2p}(A\sharp B) \quad (1.3)$$

and

$$\Phi^{2p}\left(\frac{A+B}{2}\right) \leq \frac{(K(h,2)(M^2+m^2))^{2p}}{16M^{2p}m^{2p}}(\Phi(A)\sharp\Phi(B))^{2p}. \quad (1.4)$$

Moradi et. al. [13] obtained a better bound than (1.1) and (1.2) as follows: for  $0 < mI \leq A \leq m'I \leq M'I \leq B \leq MI$ ,

$$\Phi^2\left(\frac{A+B}{2}\right) \leq \frac{K^2(h,2)}{\left(1 + \frac{(\log \frac{M'}{m'})^2}{8}\right)^2}\Phi^2(A\sharp B) \quad (1.5)$$

and

$$\Phi^2\left(\frac{A+B}{2}\right) \leq \frac{K^2(h,2)}{\left(1 + \frac{(\log \frac{M'}{m'})^2}{8}\right)^2}(\Phi(A)\sharp\Phi(B))^2, \quad (1.6)$$

where  $\Phi$  is a unital positive linear map and  $K(h, 2) = \frac{(h+1)^2}{4h}$  with  $h = \frac{M}{m}$ .

Let  $0 < mI \leq A \leq MI$  and  $\Phi$  be a positive unital linear map. Lin [11] proved the following operator inequalities:

$$|\Phi(A^{-1})\Phi(A) + \Phi(A)\Phi(A^{-1})| \leq \frac{(M+m)^2}{2Mm}I \quad (1.7)$$

and

$$\Phi(A^{-1})\Phi(A) + \Phi(A)\Phi(A^{-1}) \leq \frac{(M+m)^2}{2Mm}I. \quad (1.8)$$

Fu [6] generalized (1.7) and (1.8) when  $p \geq 1$ :

$$|\Phi^p(A^{-1})\Phi^p(A) + \Phi^p(A)\Phi^p(A^{-1})| \leq \frac{(M+m)^{2p}}{2M^p m^p}I \quad (1.9)$$

and

$$\Phi^p(A^{-1})\Phi^p(A) + \Phi^p(A)\Phi^p(A^{-1}) \leq \frac{(M+m)^{2p}}{2M^p m^p}I \quad (1.10)$$

Bhatia and Davis [3] gave an operator version of Wielandt inequality and proved that if  $0 < m \leq A \leq M$  and  $X, Y$  are two partial isometries on  $\mathcal{H}$  whose final spaces are orthogonal to each other. Then for every 2-positive linear map  $\Phi$ ,

$$\Phi(X^*AY)\Phi^{-1}(Y^*AY)\Phi(Y^*AX) \leq \left(\frac{M-m}{M+m}\right)^2\Phi(X^*AX).$$

Lin [11] conjectured that the following inequality could be true:

$$\|\Phi(X^*AY)\Phi^{-1}(Y^*AY)\Phi(Y^*AX)\Phi^{-1}(X^*AX)\| \leq \left(\frac{M-m}{M+m}\right)^2. \quad (1.11)$$

Gumus [7] obtained a close upper bound to approximate the right side of (1.11) as follows:

$$\|\Phi(X^*AY)\Phi^{-1}(Y^*AY)\Phi(Y^*AX)\Phi^{-1}(X^*AX)\| \leq \frac{(M-m)^2}{2\sqrt{Mm(M+m)}}. \quad (1.12)$$

Moradi et. al. [13] refined (1.12) as follows: for  $0 < ml \leq m'A^{-1} \leq A \leq MI$  and  $m' > 1$ ,

$$\|\Phi(X^*AY)\Phi^{-1}(Y^*AY)\Phi(Y^*AX)\Phi^{-1}(X^*AX)\| \leq \frac{(M-m)^2}{2\sqrt{Mm(M+m)}(1+\frac{(\log m')^2}{8})}, \quad (1.13)$$

where  $X$  and  $Y$  are two isometries such that  $X^*Y = 0$ ,  $\Phi$  is an arbitrary 2-positive linear map.

Liao et. al. [12] also gave a close upper bound to approximate the right side of (1.11) below:

$$\|(\Phi(X^*AY)\Phi^{-1}(Y^*AY)\Phi(Y^*AX))\|^{\frac{p}{2}}\Phi^{-\frac{p}{2}}(X^*AX)\| \leq \frac{(M-m)^p(M^\alpha+m^\alpha)^{\frac{p}{\alpha}}}{2^{2+\frac{p}{2}}(Mm)^{\frac{3}{4}}(M+m)^{\frac{p}{2}}}, \quad (1.14)$$

for  $1 \leq \alpha \leq 2$  and  $p \geq 2\alpha$ .

Recently, Kórus [9] gave a scalar inequality as follows:

$$(1 + Q(t)(\log a - \log b)^2)a^tb^{1-t} \leq ta + (1-t)b, \quad (1.15)$$

where  $t \in [0, 1]$ ,  $a, b > 0$ ,  $Q(t) = \frac{t^2}{2}\left(\frac{1-t}{t}\right)^{2t}$  and  $Q(0) = Q(1) = 0$ .

In this paper, we shall give some improvements of the inequalities mentioned above.

## 2. Main Results

Before we give the main results, let us present the following lemmas that will be useful later.

**Lemma 2.1.** (Choi inequality.) [4, p. 41] Let  $\Phi$  be a unital positive linear map, then

- (1) If  $A > 0$  and  $-1 \leq p \leq 0$ , then  $\Phi(A)^p \leq \Phi(A^p)$ , in particular,  $\Phi(A)^{-1} \leq \Phi(A^{-1})$ ;
- (2) If  $A \geq 0$  and  $0 \leq p \leq 1$ , then  $\Phi(A)^p \geq \Phi(A^p)$ ;
- (3) If  $A \geq 0$  and  $1 \leq p \leq 2$ , then  $\Phi(A)^p \leq \Phi(A^p)$ .

**Lemma 2.2.** [2] Let  $\Phi$  be a unital positive linear map and  $A, B$  be positive operators. Then for  $\alpha \in [0, 1]$

$$\Phi(A\sharp_{\alpha}B) \leq \Phi(A)\sharp_{\alpha}\Phi(B).$$

**Lemma 2.3.** [5] Let  $A, B \geq 0$ . Then the following norm inequality holds:

$$\|AB\| \leq \frac{1}{4}\|A+B\|^2.$$

**Lemma 2.4.** [4, p. 28] Let  $A, B \geq 0$ . Then for  $1 \leq r < +\infty$ ,

$$\|A^r + B^r\| \leq \|(A + B)^r\|.$$

**Lemma 2.5.** Let  $A, B \in B(\mathcal{H})$  be two positive operators such  $1 < m < M$  with the property  $mA \leq B \leq MA$ . Then

$$(1 + Q(t)(\log m)^2)A\sharp_t B \leq A\nabla_t B$$

for  $t \in [0, 1]$  and  $Q(t)$  is from (1.15).

**Proof.** From the inequality (1.15), we know that for each  $a, b > 0$  and  $t \in [0, 1]$ ,

$$(1 + Q(t)(\log a - \log b)^2)a^t b^{1-t} \leq ta + (1 - t)b.$$

Note that if  $0 < mb \leq a \leq Mb$  with  $1 < m < M$ , then by the monotonicity of logarithm function we obtain

$$(1 + Q(t)(\log m)^2)a^t b^{1-t} \leq ta + (1 - t)b.$$

Taking  $b = 1$  in the above inequality, we have

$$(1 + Q(t)(\log m)^2)a^t \leq ta + (1 - t).$$

As  $mI \leq A^{-\frac{1}{2}}BA^{-\frac{1}{2}} \leq MI$ , on choosing  $a$  with the positive operator  $A^{-\frac{1}{2}}BA^{-\frac{1}{2}}$  in the above inequality, we obtain

$$(1 + Q(t)(\log m)^2)(A^{-\frac{1}{2}}BA^{-\frac{1}{2}})^t \leq t(A^{-\frac{1}{2}}BA^{-\frac{1}{2}}) + (1 - t)I.$$

Multiplying both side by  $A^{\frac{1}{2}}$  yields the desired result.  $\square$

**Lemma 2.6.** Let  $0 < mI \leq A \leq m'I \leq M'I \leq B \leq MI$  and  $t \in [0, 1]$ . Then

$$A\nabla_t B + Mm(1 + Q(t)(\log \frac{M'}{m})^2)(A\sharp_t B)^{-1} \leq (M + m)I,$$

where  $Q(t)$  is from (1.15).

**Proof.** It is easy to see that

$$(1 - t)(MI - A)(mI - A)A^{-1} \leq 0,$$

which is equivalent to

$$(1 - t)A + (1 - t)MmA^{-1} \leq (1 - t)(M + m)I. \quad (2.1)$$

Similarly, we have

$$tB + tMmB^{-1} \leq t(M + m)I. \quad (2.2)$$

Summing up (2.1) and (2.2), we have

$$A\nabla_t B + MmA^{-1}\nabla_t B^{-1} \leq (M + m)I.$$

By  $(A\sharp_t B)^{-1} = A^{-1}\sharp_t B^{-1}$  and Lemma 2.5, we have

$$\begin{aligned} A\nabla_t B + Mm(1 + Q(t)(\log \frac{M'}{m'})^2)(A\sharp_t B)^{-1} &= A\nabla_t B + Mm(1 + Q(t)(\log \frac{M'}{m'})^2)(A^{-1}\sharp_t B^{-1}) \\ &\leq A\nabla_t B + MmA^{-1}\nabla_t B^{-1} \\ &\leq (M + m)I, \end{aligned}$$

completing the proof.  $\square$

**Theorem 2.7.** Let  $0 < mI \leq A \leq m'I \leq M'I \leq B \leq MI$  and  $p \geq 1$ . Then for every positive unital linear map  $\Phi$ ,

$$\Phi^{2p}(A\nabla_t B) \leq \left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^{2p} \Phi^{2p}(A\sharp_t B) \quad (2.3)$$

and

$$\Phi^{2p}(A\nabla_t B) \leq \left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^{2p} (\Phi(A)\sharp_t \Phi(B))^{2p}, \quad (2.4)$$

where  $t \in [0, 1]$ ,  $h = \frac{M}{m}$  and  $Q(t)$  is from (1.15).

**Proof.** By computation, we can obtain

$$\begin{aligned} &\|\Phi^p(A\nabla_t B)M^p m^p(1 + Q(t)(\log \frac{M'}{m'})^2)^p \Phi^{-p}(A\sharp_t B)\| \\ &\leq \frac{1}{4} \|\Phi^p(A\nabla_t B) + M^p m^p(1 + Q(t)(\log \frac{M'}{m'})^2)^p \Phi^{-p}(A\sharp_t B)\|^2 \quad (\text{by Lemma 2.3}) \\ &\leq \frac{1}{4} \|\Phi(A\nabla_t B) + Mm(1 + Q(t)(\log \frac{M'}{m'})^2)\Phi^{-1}(A\sharp_t B)\|^{2p} \quad (\text{by Lemma 2.4}) \\ &\leq \frac{1}{4} \|\Phi(A\nabla_t B) + Mm(1 + Q(t)(\log \frac{M'}{m'})^2)\Phi((A\sharp_t B)^{-1})\|^{2p} \quad (\text{by Lemma 2.1}) \\ &\leq \frac{1}{4} (M + m)^{2p}. \quad (\text{by Lemma 2.6}) \end{aligned}$$

Thus we obtain

$$\|\Phi^p(A\nabla_t B)\Phi^{-p}(A\sharp_t B)\| \leq \left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^p,$$

which is equivalent to (2.3).

Next we prove (2.4). Compute

$$\begin{aligned} &\|\Phi^p(A\nabla_t B)M^p m^p(1 + Q(t)(\log \frac{M'}{m'})^2)^p (\Phi(A)\sharp_t \Phi(B))^{-p}\| \\ &\leq \frac{1}{4} \|\Phi^p(A\nabla_t B) + M^p m^p(1 + Q(t)(\log \frac{M'}{m'})^2)^p (\Phi(A)\sharp_t \Phi(B))^{-p}\|^2 \\ &\leq \frac{1}{4} \|\Phi(A\nabla_t B) + Mm(1 + Q(t)(\log \frac{M'}{m'})^2)(\Phi(A)\sharp_t \Phi(B))^{-1}\|^{2p} \\ &\leq \frac{1}{4} \|\Phi(A\nabla_t B) + Mm(1 + Q(t)(\log \frac{M'}{m'})^2)(\Phi(A\sharp_t B))^{-1}\|^{2p} \quad (\text{by Lemma 2.2}) \\ &\leq \frac{1}{4} \|\Phi(A\nabla_t B) + Mm(1 + Q(t)(\log \frac{M'}{m'})^2)\Phi((A\sharp_t B)^{-1})\|^{2p} \\ &\leq \frac{1}{4} (M + m)^{2p}. \end{aligned}$$

Thus we obtain

$$\|\Phi^p(A\nabla_t B)(\Phi(A)\sharp_t\Phi(B))^{-p}\| \leq \left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^p,$$

which completes the proof.  $\square$

**Remark 2.8.** Letting  $p = 1$  and  $t = \frac{1}{2}$  in Theorem 2.7, we thus get (1.5) and (1.6) by (2.3) and (2.4), respectively.

**Lemma 2.9.** [8] For any bounded operator  $X$ ,

$$|X| \leq tI \Leftrightarrow \|X\| \leq t \Leftrightarrow \begin{bmatrix} tI & X \\ X^* & tI \end{bmatrix} \geq 0 \quad (t \geq 0)$$

**Theorem 2.10.** Let  $0 < mI \leq A \leq m'I \leq M'I \leq B \leq MI$  and  $p \geq 1$ . Then for every positive unital linear map  $\Phi$ ,

$$|\Phi^p(A\nabla_t B)\Phi^p((A\sharp_t B)^{-1}) + \Phi^p((A\sharp_t B)^{-1})\Phi^p(A\nabla_t B)| \leq 2\left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^p I \tag{2.5}$$

and

$$\Phi^p(A\nabla_t B)\Phi^p((A\sharp_t B)^{-1}) + \Phi^p((A\sharp_t B)^{-1})\Phi^p(A\nabla_t B) \leq 2\left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^p I, \tag{2.6}$$

where  $t \in [0, 1]$ ,  $h = \frac{M}{m}$  and  $Q(t)$  is from (1.15).

**Proof.** By computation, one can have

$$\begin{aligned} & \|\Phi^p(A\nabla_t B)M^p m^p(1 + Q(t)(\log \frac{M'}{m'})^2)^p \Phi^p((A\sharp_t B)^{-1})\| \\ & \leq \frac{1}{4} \|\Phi^p(A\nabla_t B) + M^p m^p(1 + Q(t)(\log \frac{M'}{m'})^2)^p \Phi^p((A\sharp_t B)^{-1})\|^2 \quad (\text{by Lemma 2.3}) \\ & \leq \frac{1}{4} \|\Phi(A\nabla_t B) + Mm(1 + Q(t)(\log \frac{M'}{m'})^2)\Phi((A\sharp_t B)^{-1})\|^{2p} \quad (\text{by Lemma 2.4}) \\ & \leq \frac{1}{4} (M + m)^{2p}, \quad (\text{by Lemma 2.6}) \end{aligned}$$

which is equivalent to

$$\|\Phi^p(A\nabla_t B)\Phi^p((A\sharp_t B)^{-1})\| \leq \left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^p. \tag{2.7}$$

By (2.7) and Lemma 2.9 we obtain

$$\begin{bmatrix} \left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^p I & \Phi^p(A\nabla_t B)\Phi^p((A\sharp_t B)^{-1}) \\ \Phi^p((A\sharp_t B)^{-1})\Phi^p(A\nabla_t B) & \left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^p I \end{bmatrix} \geq 0$$

and

$$\begin{bmatrix} \left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^p I & \Phi^p((A\sharp_t B)^{-1})\Phi^p(A\nabla_t B) \\ \Phi^p(A\nabla_t B)\Phi^p((A\sharp_t B)^{-1}) & \left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^p I \end{bmatrix} \geq 0.$$

Summing up the two operator matrices above, we get

$$\begin{bmatrix} 2\left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^p I & X \\ X^* & 2\left(\frac{K(h,2)}{4^{\frac{1}{p}-1}(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^p I \end{bmatrix} \geq 0,$$

where we denote that  $X = \Phi^p(A\nabla_t B)\Phi^p((A\sharp_t B)^{-1}) + \Phi^p((A\sharp_t B)^{-1})\Phi^p(A\nabla_t B)$ . It is easy to see that  $X$  is self-adjoint. Utilizing Lemma 2.9 again, we thus obtain (2.5) and (2.6).  $\square$

**Remark 2.11.** Putting  $t = 0$  in Theorem 2.10, we obtain (1.9) and (1.10) by (2.5) and (2.6), respectively.

Next, we give improvements of (1.3) and (1.4).

**Theorem 2.12.** Let  $0 < mI \leq A \leq m'I \leq M'I \leq B \leq MI$  and  $p \geq 2$ . Then for every positive unital linear map  $\Phi$ ,

$$\Phi^{2p}(A\nabla_t B) \frac{(K(h,2)(M^2+m^2))^{2p}}{16M^{2p}m^{2p}(1+Q(t)(\log \frac{M'}{m'})^2)^{2p}} \Phi^{2p}(A\sharp_t B) \tag{2.8}$$

and

$$\Phi^{2p}(A\nabla_t B) \leq \frac{(K(h,2)(M^2+m^2))^{2p}}{16M^{2p}m^{2p}(1+Q(t)(\log \frac{M'}{m'})^2)^{2p}} (\Phi(A)\sharp_t\Phi(B))^{2p}, \tag{2.9}$$

where  $t \in [0, 1]$ ,  $h = \frac{M}{m}$  and  $Q(t)$  is from (1.15).

**Proof.** It is easy to verify that

$$mI \leq \Phi(A\nabla_t B) \leq MI.$$

Thus we obtain

$$m^2I \leq \Phi^2(A\nabla_t B) \leq M^2I.$$

Therefore

$$(M^2I - \Phi^2(A\nabla_t B))(m^2 - \Phi^2(A\nabla_t B))\Phi^{-2}(A\nabla_t B) \leq 0.$$

That is equivalent to

$$M^2m^2\Phi^{-2}(A\nabla_t B) + \Phi^2(A\nabla_t B) \leq (M^2 + m^2)I. \tag{2.10}$$

Taking  $p = 1$  in (2.3), we have

$$\Phi^2(A\nabla_t B) \leq \left(\frac{K(h,2)}{(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^2 \Phi^2(A\sharp_t B),$$

which is equivalent to

$$\Phi^{-2}(A\sharp_t B) \leq \left(\frac{K(h,2)}{(1+Q(t)(\log \frac{M'}{m'})^2)}\right)^2 \Phi^{-2}(A\nabla_t B). \tag{2.11}$$

Thus we compute

$$\begin{aligned} & \|\Phi^p(A\nabla_t B)M^p m^p \Phi^{-p}(A\sharp_t B)\| \\ & \leq \frac{1}{4} \left\| \frac{K^{\frac{p}{2}}(h,2)}{(1+Q(t)(\log \frac{M'}{m'})^2)^{\frac{p}{2}}} \Phi^p(A\nabla_t B) + \frac{(1+Q(t)(\log \frac{M'}{m'})^2)^{\frac{p}{2}} M^p m^p}{K^{\frac{p}{2}}(h,2)} \Phi^{-p}(A\sharp_t B) \right\|^2 \\ & \leq \frac{1}{4} \left\| \frac{K(h,2)}{(1+Q(t)(\log \frac{M'}{m'})^2)} \Phi^2(A\nabla_t B) + \frac{(1+Q(t)(\log \frac{M'}{m'})^2)M^2 m^2}{K(h,2)} \Phi^{-2}(A\sharp_t B) \right\|^p \\ & \leq \frac{1}{4} \left\| \frac{K(h,2)}{(1+Q(t)(\log \frac{M'}{m'})^2)} \Phi^2(A\nabla_t B) + \frac{K(h,2)M^2 m^2}{(1+Q(t)(\log \frac{M'}{m'})^2)} \Phi^{-2}(A\nabla_t B) \right\|^p \quad (\text{by (2.11)}) \\ & = \frac{1}{4} \left\| \frac{K(h,2)}{(1+Q(t)(\log \frac{M'}{m'})^2)} (\Phi^2(A\nabla_t B) + M^2 m^2 \Phi^{-2}(A\nabla_t B)) \right\|^p \\ & \leq \frac{1}{4} \frac{(K(h,2)(M^2+m^2))^p}{(1+Q(t)(\log \frac{M'}{m'})^2)^p}, \quad (\text{by (2.10)}) \end{aligned}$$

which is equivalent to (2.8). The proof of (2.9) is similar, we omit the details.  $\square$

**Theorem 2.13.** Let  $0 < mI \leq m'A^{-1} \leq A \leq MI$  and  $m' > 1$  and let  $X$  and  $Y$  be two isometries such that  $X^*Y = 0$ . For every 2-positive linear map  $\Phi$ , we have

$$\|(\Phi(X^*AY)\Phi^{-1}(Y^*AY)\Phi(Y^*AX))^\frac{p}{2}\Phi^{-\frac{p}{2}}(X^*AX)\| \leq \frac{(M-m)^p(M^\alpha+m^\alpha)^\frac{p}{\alpha}}{2^{2+\frac{p}{2}}(Mm)^\frac{3}{4}(M+m)^\frac{p}{2}(1+\frac{(\log m')^2}{8})^\frac{p}{2}} \tag{2.12}$$

for  $1 \leq \alpha \leq 2$  and  $p \geq 2\alpha$ .

**Proof.** By (1.13), we obtain

$$(\Phi(X^*AY)\Phi^{-1}(Y^*AY)\Phi(Y^*AX))^2 \leq \left(\frac{(M-m)^2}{2\sqrt{Mm}(M+m)(1+\frac{(\log m')^2}{8})}\right)^2\Phi^2(X^*AX),$$

By L-H inequality [4, p. 112], we have

$$(\Phi(X^*AY)\Phi^{-1}(Y^*AY)\Phi(Y^*AX))^\alpha \leq \left(\frac{(M-m)^2}{2\sqrt{Mm}(M+m)(1+\frac{(\log m')^2}{8})}\right)^\alpha\Phi^\alpha(X^*AX).$$

Thus we get

$$\begin{aligned} & \left\| \frac{(M-m)^p}{2^\frac{p}{2}(M+m)^\frac{p}{2}(1+\frac{(\log m')^2}{8})^\frac{p}{2}} M^\frac{p}{4} m^\frac{p}{4} (\Phi(X^*AY)\Phi^{-1}(Y^*AY)\Phi(Y^*AX))^\frac{p}{2}\Phi^{-\frac{p}{2}}(X^*AX) \right\| \\ & \leq \frac{1}{4} \|(\Phi(X^*AY)\Phi^{-1}(Y^*AY)\Phi(Y^*AX))^\frac{p}{2}\| + \left(\frac{(M-m)^2}{2(M+m)(1+\frac{(\log m')^2}{8})}\sqrt{Mm}\Phi^{-1}(X^*AX)\right)^\frac{p}{2} \|^2 \\ & \leq \frac{1}{4} \|(\Phi(X^*AY)\Phi^{-1}(Y^*AY)\Phi(Y^*AX))^\alpha\| + \frac{(M-m)^{2\alpha}}{2^\alpha(M+m)^\alpha(1+\frac{(\log m')^2}{8})^\alpha} M^\frac{\alpha}{2} m^\frac{\alpha}{2} \Phi^{-\alpha}(X^*AX) \|^ \frac{p}{\alpha} \\ & \leq \frac{1}{4} \left\| \left(\frac{(M-m)^2}{2\sqrt{Mm}(M+m)(1+\frac{(\log m')^2}{8})}\right)^\alpha\Phi^\alpha(X^*AX) + \frac{(M-m)^{2\alpha}}{2^\alpha(M+m)^\alpha(1+\frac{(\log m')^2}{8})^\alpha} M^\frac{\alpha}{2} m^\frac{\alpha}{2} \Phi^{-\alpha}(X^*AX) \right\|^\frac{p}{\alpha} \\ & = \frac{(M-m)^{2p}}{2^{2+p}M^\frac{p}{2}m^\frac{p}{2}(M+m)^p(1+\frac{(\log m')^2}{8})^p} \|\Phi^\alpha(X^*AX) + M^\alpha m^\alpha\Phi^{-\alpha}(X^*AX)\|^\frac{p}{\alpha} \\ & \leq \frac{(M-m)^{2p}(M^\alpha+m^\alpha)^\frac{p}{\alpha}}{2^{2+p}M^\frac{p}{2}m^\frac{p}{2}(M+m)^p(1+\frac{(\log m')^2}{8})^p}, \end{aligned}$$

which completes the proof.  $\square$

Based on (2.12), we thus get an improvement of (1.14).
