

## Preface

The international conference XXI Geometrical Seminar 2022, was held at Belgrade, Serbia from June 26th to July 2nd 2022. This special issue of journal *Filomat* gathers peer-reviewed papers presented at the the conference from different geometric topics. The spectrum of papers ranges from theoretical research to applications in several fields of science. The XXI Geometrical Seminar had around 130 participants from all over the world. This is traditional meeting bringing together mathematicians, physicists and scientist from related fields interested in Geometry and its applications. The aim of the Geometrical Seminar is to enable researches to give lectures on new results, exchange ideas, problems and conjectures. This issue contains papers presented at the XXI Geometrical Seminar. The papers were accepted for presentation after having been subjected to the usual strict reviewing process of the conference committee. The editors thank the authors for their contributions of high quality, the members of the Committees of Geometrical Seminar and to the Faculty of Mathematics, Belgrade, to the Faculty of Science and Mathematics, Nis, to the Faculty of Science, Kragujevac and Mathematical Institute SANU for their great efforts in organizing this conference.
